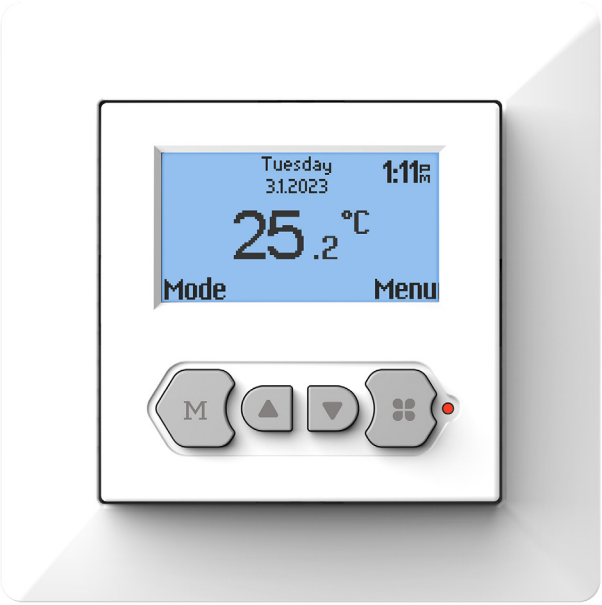
MIC Wi-Fi or MIC Basic Thermostat

Smart WiFi thermostat



The MIC Wi-Fi thermostat is an intuitive programmable thermostat designed to control electric underfloor heating systems. Install the App on your smart device to control the heating system remotely with this Wi-Fi thermostat.

An App is available in the Apple App Store and on Google Play. Within the App, you can program and adjust settings. Extra thermostats can easily be added to control different rooms.

In addition to the Wi-Fi connection, this thermostat can also operate as a stand-alone unit in the basic version. It is fully programmable with the simple user interface and 4 buttons.

An open window function is also included. If the temperature suddenly drops, the thermostat automatically switches off to avoid extra electricity costs.
