

MIC2 Wi-Fi Trouble Shooting

Wi-Fi Mode selection:

Smart Wi-Fi=> This mode will connect the thermostat directly to your Wi-Fi and allow you wherever you are to control your underfloor heating (requirement 2.4GHZ & 5GHZ Wi-Fi please note high level firewall or parental controls can cause issues with trying to connect the system as it can block the connection to the router)

AP Wi-Fi=> This mode will make the Wi-Fi thermostat emit its own Wi-Fi signal, it then uses your phone to allow it to connect to your Wi-Fi router allowing you to control your thermostat anywhere. (This method should only be done if the Smart WiFi method does not allow you to automatically connect).

How to select a Wi-Fi Mode:

- 1) To select a Wi-Fi mode, press the up and down button at the same time
- 2) It will say "Wifi config" at the top of the screen and "Smart WiFi" will appear in the middle of the screen.
- 3) To change to "AP Wifi" then press the right hand button once and then the up arrow once and then press the right hand button to confirm. This will now change the thermostat to "AP Wifi".

How to connect your phone to the Wi-Fi thermostat:

- 1) Download the app 'WARMME', the app icon should look like this:

- 2) Open the app and follow the log in instructions to create a profile.
- 3) Once on the main app page, it shall say 'NO DEVICES, PLEASE ADD'. Press the button that says, 'ADD DEVICE'.
- 4) Select 'ADD MANUALLY'.
- 5) Press 'THERMOSTAT (Wi-Fi 2.4+5G)'.
- 6) Depending on if you selected Smart Wifi or Ap Wifi there are two different ways in which you can connect your phone to the Wi-Fi thermostat.

USING SMART WIFI METHOD

- 1) After pressing the 'THERMOSTAT (Wi-Fi 2.4+5G)', (See point 5) it will prompt you to input your Wi-Fi Network name and password, input your Wi-Fi Network name and password. Once done press "Next"
 - 2) Press "Confirm the indicator is rapidly blink" and click "Next"
 - 3) You will be taken to a screen which will connect your thermostat to the Wi-Fi Network, wait until the circle has gone green or changes to the page with the title "Add Device"
 - 4) It will then download the thermostat onto your phone and once downloaded click to the button labelled "Done"
- (If this comes up with a message "Failed to add device, Check demerit points and retry" this means you will have to use the **AP Wifi** Method)

USING AP WIFI METHOD

- 1) Go back to "**How to select a Wi-Fi Mode**" and follow the steps to select **AP WIFI**. Then follow points 1 => 5
- 2) After pressing the 'THERMOSTAT (Wi-Fi 2.4+5G)', (See point 5) it will prompt you to input your Wi-Fi Network name and password, input your Wi-Fi Network name and password. Once done press "Next"
- 3) In the top right corner it will say "EZ Mode" click on it and then Click "AP Mode".
- 4) you then press "Confirm the indicator blinking slowly" and then press the "Next".
- 5) It will say "Connect phone to device's wifi hotspot" and click "Connect now"
- 6) It should take you to the Wi-Fi settings page on your phone (the Wi-Fi selection where you go to connect a WiFi hub) select the Network that says "Smartlife-****" (Please note the * means it will be a letter or a number its unique to each thermostat)
- 7) Once a tick appears next to "Smartlife-****" go back to the WARMME app.
- 8) It should show a circle with the Controller connecting to the Wi-Fi network and after 20 – 40 seconds it will say "Successfully connected".

9) It will then download the thermostat onto your phone and once downloaded click to the button labelled “Done”

IF your still having issue's with connecting then please call us on 01887 822020 or email us on technical@klima.co.uk.
